Electrolysis is an excellent method of permanent hair removal to target small areas of coarse hair types. Using Galvanic and Diathermy blend is the only effective way to treat white/non coloured hair permanently, hair types that IPL & Alkaline wash treatments find difficult to target. Hence, Electrolysis works fantastically in combination with IPL & Alkaline wash to gain the best results of hair removal. Also very effective for the removal of spider naevi, cherry spots, milia & skin tags. As with using electrolysis for hair removal, the best results are achieved on small surface areas.
